

Press Release

Wim Eraerts appointed Chief Operating Officer at farow

Thursday, May 8, 2025 - Hasselt, Belgium

Farow is a pioneer in digital healthcare solutions for neurological disorders. The company was formerly known as epihunter, a name now used exclusively for its epilepsy pipeline. Today it announces the appointment of **Wim Eraerts** as **Chief Operating Officer**, effective immediately.

“Wim brings a wealth of experience in business and financial leadership, with an impressive track record spanning decades in the life sciences industry,” said **Tim Buckinx**, CEO of farow. “His deep expertise in both biotech and medtech operations will be invaluable as we accelerate the development and commercialization of our line-up of therapeutic and non-therapeutic digital interventions for epilepsy, Parkinson’s, and other brain disorders.”

Wim Eraerts most recently held senior leadership roles at **Gilead Sciences**, where he served as General Manager for Belgium and Luxembourg. Prior to Gilead, he was **Vice President of Finance, Supply Chain & IT** for **St. Jude Medical** across Europe, the Middle East, and Africa. He began his career at **Arthur Andersen** and holds an MBA from the **Solvay Business School of Management** at the Vrije Universiteit Brussel.

“I’m excited to join the talented team at farow,” said Wim Eraerts. “The company’s technology platform and pipeline of digital interventions holds tremendous potential to transform the lives of people with neurological disorders. I look forward to supporting farow as it advances toward the launch of impactful healthcare solutions that truly make a difference.”

About farow

(formerly known as epihunter, a name now used exclusively for its epilepsy pipeline)

Farow develops groundbreaking digital solutions for people living with neurological conditions.

Founded as **epihunter**, the company’s mission is to enable people with brain disorders to participate more fully in society. Farow’s digital interventions combine wearable brain sensors with real-time AI, aiming for a wide range of digital diagnostics, therapeutics and assistive solutions for relieved impact in daily life, improved diagnosis and treatment, and advanced clinical research.
